5.1.2. Student Grade Based on Aggregate

This program calculates total marks, percentage, and assigns a grade based on marks in four subjects.

Algorithm

1. **Start.**
2. **Input:** Read four space-separated integers representing marks for four subjects.
3. **Calculation:**

- Calculate **Total Marks** by adding the four values.
- Calculate **Aggregate Percentage** (Total Marks / 400 * 100).

4. **Grade Determination:**

- If Aggregate $>75\%$: **Distinction**.
- Else if Aggregate $\geq 60\%$ and $<75\%$: **First Division**.
- Else if Aggregate $\geq 50\%$ and $<60\%$: **Second Division**.
- Else if Aggregate $\geq 40\%$ and $<50\%$: **Third Division**.
- Else: **Fail**.

5. **Output:**

- Print Total Marks.
- Print Aggregate Percentage rounded to two decimal places.
- Print the Grade.

6. **End.**

5.1.2. Student Grade Based on Aggregate
01:24
Write a program to calculate the total marks, aggregate percentage, and grade of a student based on marks in four subjects.
The grade is determined as follows:
• Aggregate > 75%: Distinction
• Aggregate >= 60% and < 75%: First Division
• Aggregate >= 50% and < 60%: Second Division
• Aggregate >= 40% and < 50%: Third Division
• Aggregate < 40%: Fail
Input Format:
• Four space-separated integers representing the marks in four subjects.
Output Format:
• The first line should print the total marks.
• The second line should print the aggregate percentage with two decimal places.
• The third line should print the grade.
Constraints:
• 0<=marks in each subject<=100
