

3.1.1. Largest of Three Numbers

Algorithm: 1 Start

2 Read first integer A

3 Read second integer B

4 Read third integer C

5 If $A \geq B$ and $A \geq C$, then

- Largest = A

6 Else if $B \geq A$ and $B \geq C$, then

- Largest = B

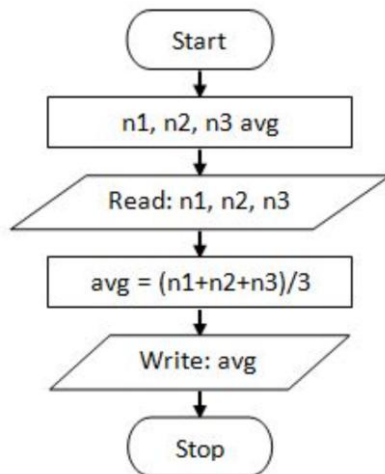

7 Else

- Largest = C

8 Display the value of Largest

9 End

Flowchart:

The screenshot shows the CodeTANTRA IDE interface. On the left, the problem statement for '3.1.1. Largest of Three Numbers' is displayed, including input and output formats. The main editor shows a Python script that reads three integers from the user and prints the largest one using the `max()` function. The right sidebar shows the test results, indicating that 2 out of 2 shown test cases and 2 out of 2 hidden test cases passed. The average time for the test cases is 0.018s, and the maximum time is 0.020s.

```
1 a = int(input())
2 b = int(input())
3 c = int(input())
4
5
6 largest = max(a, b, c)
7 print(largest)
8
9
```

Test case 1 passed
Expected output: 7
Actual output: 7
