

1.1 Area of Circle

Algorithm : **Algorithm: Area of a Circle**

1. Start
2. Read the radius r
3. Set $\pi = 3.14$
4. Calculate area using the formula:
$$\text{area} = \pi \times r \times r$$
5. Display the area formatted to 4 decimal places
6. Stop

Flowchart :

1.1.1. Area of Circle

Write a Python program that calculates the area of a circle when the radius is provided by the user. Use $\pi = 3.14$ and display the area.

Input Format:

- A single line containing a floating-point number representing the radius.

Output Format:

- Print the computed area of the circle formatted to 4 decimal places.

Sample Test Cases +

```
1 radius = float(input())
2 area = 3.14 * radius * radius
3 print(f"area:.4f")
```

Average time: 0.003 s (3.25 ms) Maximum time: 0.004 s (4.00 ms)

2 out of 2 shown test case(s) passed
2 out of 2 hidden test case(s) passed

Test case 1 4 ms
Expected output: 3.36
Actual output: 3.36
35.4493 35.4493

Test case 2 4 ms
