

7.1.1 LEAP YEAR

ALGORITHM

Step 1: Start

Step 2: Input integer n

Step 3: If $n \leq 0$

Print "Invalid Input" and Stop

Step 4: Set $i \leftarrow n$

Step 5: While $i \geq 1$

Set $j \leftarrow 1$

While $j \leq i$

Print "*" (without space)

$j \leftarrow j + 1$

Move to next line

$i \leftarrow i - 1$

Step 6: Stop

7.1.1. Inverted Star Pattern

Write a Python program to print an inverted right-angled triangle star pattern.

For a given number n , the program should print n rows of stars where the first row contains n stars, the second row contains $n - 1$ stars, and each subsequent row has one less star than the previous row, ending with 1 star in the last row.

All rows should be left-aligned with no spaces between the stars.

Input Format:

- Single line contains an integer n representing the number of rows

Output Format:

- Print an inverted right-angled triangle star pattern with n rows

Note:

- Refer to sample test cases for better understanding.

Sample Test Cases

starPrint.py

```

1 n = int(input())
2
3 for i in range(n, 0, -1):
4     print("*" * i)

```

Average time

0.003 s

3.00 ms

Maximum time

0.005 s

5.00 ms

3 out of 3 shown test case(s) passed

3 out of 3 hidden test case(s) passed

Test case 1

Expected output

```

3
***
**
*

```

Actual output

```

3
***
**
*

```
